A CRM APPLICATION FOR THE CHAI SHOP & CO

User Story Acceptance Criteria

The Chai Shop is designed to provide customers with a simple, convenient, and enjoyable way to order their favourite chai and snacks. As a customer, I want to access the chai shop menu and view different varieties of tea, coffee, cool drinks, and snacks along with their prices, so that I can easily select the items I prefer. The system allows customers to register and log in to their account, browse the available products, search for specific items, and add their selected products to the shopping cart. Customers can also choose the required quantity and customize their chai according to their preferences, such as sugar level, milk, or other available options. After selecting the required items, the customer can review the cart, check the total amount, and place the order. The system can provide online payment options, making the ordering process faster and more convenient. Once an order is placed, the customer can view its status, such as order received, preparing, ready, or completed. This helps the customer know the current progress of the order and reduces unnecessary waiting time.

From the shop owner's perspective, the system helps manage the chai shop efficiently. The owner can add new products, update product details and prices, remove unavailable items, and manage the menu whenever required . The owner can also view incoming customer orders, confirm orders, update their status, and manage the availability of products. The system maintains customer and order information, which helps the shop provide better service and manage daily activities effectively. Overall, the Chai Shop system provides a user-friendly platform that connects customers and the shop, simplifies the ordering process, reduces waiting time, improves order management, and creates a smooth digital experience for both customers and the shop owner.

1. INTRODUCTION

1.1 Project Overview

The project aims to achieve the following measurable objective### PROJECT OVERVIEW

The **Chai Shop** is a digital platform developed to simplify and improve the process of ordering and managing chai and snack items. The main purpose of this project is to provide customers with a convenient way to explore the available menu, select their favourite chai and snacks, place orders, and make payments without having to wait for a long time at the shop. The system provides an organized interface where customers can view product names, descriptions, prices, and availability before placing an order. Customers can register or log in to the system, browse different categories, search for specific items, select the required quantity, add products to the cart, and confirm their orders.

The system also helps customers track their orders through different stages such as order received, preparing, ready, and completed. This provides better communication between the customer and the shop and helps reduce confusion during busy hours. Customers can also provide feedback or reviews based on their experience, which can help the shop improve its services and product quality.

For the shop owner or administrator, the Chai Shop system provides useful features for managing the overall business activities. The administrator can add new chai and snack items, update product details and prices, remove unavailable products, and manage the menu according to the shop's requirements. The administrator can also view customer orders, update order status, monitor sales, and maintain customer information. By managing these activities through a single platform, the system reduces manual work and makes order management more organized.

The project focuses on providing a **simple, user-friendly, and efficient digital solution** for both customers and shop owners. It can help reduce waiting time, improve order accuracy, maintain proper records, and provide a better customer experience. Overall, the Chai Shop project combines online ordering and shop management features into one system, making the traditional chai shop experience more convenient, organized, and suitable for a modern digital environment.s:

1.2 Purpose

The main purpose of the CRM Application for The Chai Shop & Co is to develop a centralized Salesforce-based system that simplifies customer and sales management while improving the efficiency of daily business operations. The application is designed to organize customer, employer, and account information in a structured manner and classify customers as Online or Offline for better service management. It aims to automate order quantity and total bill calculations, reducing manual effort and improving transaction accuracy. The system also provides meaningful reports and dashboards to analyse sales activities, customer information, and business performance. In addition, automated birthday email notifications with personalized special offers are implemented to improve customer communication, engagement, and loyalty.

Absolutely. Here is a **project-specific and polished version** of the entire **Ideation Phase**, keeping your original structure but aligning it closely with the Salesforce CRM application for **The Chai Shop & Co**.

2. IDEATION PHASE

2.1 Problem Statement

The Chai Shop & Co requires a centralized CRM application to manage customer information, sales transactions, billing, reporting, and customer communication. The following problem statements identify the major challenges faced by the key users of the system.

Cat PS-1 – Sales Representative

Category	Description
I am (Customer)	A Sales Representative at The Chai Shop & Co
I'm trying to	Manage customer information, orders, quantities, and billing efficiently

But	Manual data entry and calculations can result in incorrect order quantities and billing amounts
Because	Customer and sales information is not efficiently managed through a centralized automated system
Which makes me feel	Stressed, time-consuming, and less efficient in handling customer transactions

PS-2 – Store Manager

Category	Description
I am (Customer)	A Store Manager at The Chai Shop & Co
I'm trying to	Monitor sales performance, customer records, orders, and business activities
But	It can be difficult to obtain accurate and timely sales information
Because	Sales and customer data may be scattered across different records or files, making analysis difficult
Which makes me feel	Less informed and inefficient when making business decisions

PS-3 – Customer

Category	Description
I am (Customer)	A Customer of The Chai Shop & Co
I'm trying to	Receive timely updates, personalized offers, and better customer service
But	I may not receive relevant offers or notifications at the right time
Because	Customer communication is not fully automated and personalized
Which makes me feel	Less engaged and less connected with the business

2.2 Empathy Map Canvas

Target Users

- Sales Representatives
- Store Managers
- System Administrators
- Business Analysts
- Customers

Empathy Analysis

Aspect	Description
Think & Feel	Users need accurate customer information, efficient sales processing, reliable calculations, and easily accessible business insights.
Hear	Feedback from customers, sales representatives, store managers, and management regarding sales performance and customer service.
See	Customer records, sales transactions, orders, spreadsheets, manual calculations, and existing business records.
Say & Do	Enter and update customer details, process orders, calculate bills, monitor sales, generate reports, and communicate with customers.
Pain	Manual calculations, data-entry errors, scattered information, delayed reports, repetitive tasks, and lack of timely customer communication.
Gain	Centralized customer information, automated calculations, organized records, real-time reports and dashboards, and automated customer notifications.

2.3 Brainstorming

Brainstormed Ideas

During the ideation process, several possible solutions were considered for improving customer relationship and sales management at The Chai Shop & Co:

- Manual customer and sales record management
- Excel-based customer and billing management
- Standalone web-based CRM application
- Cloud-based CRM application
- Salesforce-based CRM application
- Automated sales calculation system
- Automated email notification system
- Reports and dashboards for sales analysis
- Customer classification using Online and Offline record types

Selected Idea

Salesforce-Based CRM Application for The Chai Shop & Co

The selected solution is a **Salesforce-based CRM application** that provides centralized customer and account management, Online and Offline customer classification, automated order and billing calculations, reports and dashboards for sales analysis, and automated birthday email notifications with personalized offers. The solution is designed to reduce manual effort, improve data accuracy, streamline sales operations, and enhance customer engagement.

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

The Customer Journey Map describes the major steps followed by users while interacting with the Salesforce CRM application. The system is designed to simplify customer management, order processing, billing, reporting, and decision-making.

Journey Stages

1. Login

- User securely logs into the Salesforce CRM application.
- User authentication ensures that only authorized users can access the system.

2. Access CRM Application

- The user accesses the Salesforce Lightning application.
- Users can navigate to the required CRM objects, records, reports, and dashboards based on their permissions.

3. Enter Customer Data

- Sales representatives enter and maintain customer information.
- Customer records can be created, updated, and viewed according to the user's access level.
- Validation rules help maintain accurate and consistent data.

4. Manage Orders

- Users create and manage customer orders.
- Order-related information is stored in Salesforce objects.
- Automation can be used to perform calculations and update related records.

5. Calculate Bills

- The system processes billing-related information based on order details.
- Salesforce automation reduces manual calculation and data-entry errors.

6. View Reports and Dashboards

- Users can view sales, customer, order, and billing information through reports and dashboards.
- Managers can monitor business performance using summarized information.

7. Decision Making

- Managers and business users analyse CRM information to identify sales trends, customer activity, and business performance.
- The information supports data-driven business decisions.

Customer Journey Flow

Login → Access CRM Application → Enter Customer Data → Manage Orders → Calculate Bills → View Reports & Dashboards → Decision Making

3.2 Solution Requirements

The solution requirements define the functional and non-functional capabilities required for implementing the CRM application using Salesforce.

Functional Requirements

FR No.	Requirement	Description
FR-1	**User Login**	The system should allow authorized users to securely log in to the Salesforce CRM application.

FR-2	**Object Creation and Management**	The system should provide the required standard and custom Salesforce objects to store customer, order, billing, and related business information.
FR-3	**Customer Data Entry**	Users should be able to create, update, and manage customer information through Salesforce forms.
FR-4	**Order and Billing Automation**	The system should automate relevant order and billing calculations using Salesforce Flow, formulas, and validation rules.
FR-5	**Data Validation**	The system should validate entered information and prevent incorrect or incomplete data from being stored.
FR-6	**Report Generation**	The system should generate reports containing customer, sales, order, and billing information for analysis.
FR-7	**Dashboard Visualization**	The system should display important business information through Salesforce dashboards and visual components.
FR-8	**Email Automation**	The system should automatically send relevant emails or notifications based on predefined business conditions and automation rules.
FR-9	**Access Control**	The system should restrict access to objects, records, and fields according to user permissions.
FR-10	**Data Management**	The system should allow authorized users to create, update, view, and manage CRM records efficiently.

Non-Functional Requirements

NFR-1: Usability

The CRM system should be simple and easy to use for sales representatives, managers, administrators, and other authorized users without requiring extensive technical knowledge.

Requirements:

- Simple and intuitive user interface
- Clear navigation between CRM objects and applications

- Easy-to-understand data entry forms
- User-friendly reports and dashboards
- Consistent Salesforce Lightning interface

Example:

A new sales employee should be able to log in to Salesforce, locate the customer management section, enter customer information, and create or update an order with minimal assistance.

The Salesforce Lightning interface provides standardized navigation and user-friendly components for interacting with CRM data.

NFR-2: Security

The system must protect customer, order, billing, and business information from unauthorized access.

Requirements:

- Role-based access control
- Secure user authentication
- Object-level security
- Field-level security
- Record-level access control
- Permission Sets and Profiles
- Appropriate access restrictions for sensitive billing information

Example:

Only authorized users should be able to view or modify sensitive billing information, while sales representatives should have access only to the records and fields required for their responsibilities.

NFR-3: Reliability

The CRM system should consistently perform its intended functions and maintain accurate business information.

Requirements:

- Reliable data storage
- Validation of user-entered information
- Error handling in automation
- Consistent execution of Salesforce Flows
- Data backup and recovery mechanisms
- Prevention of duplicate or invalid information where applicable

Example:

When a user creates or updates an order, validation rules and automation should ensure that required information is correctly entered before the record is processed.

NFR-4: Performance

The system should provide an efficient user experience when accessing CRM records, reports, and dashboards.

Requirements:

- Fast loading of CRM pages
- Efficient report generation
- Responsive dashboards
- Efficient automation
- Minimal unnecessary processing

Example:

When a manager generates a monthly sales report containing many customer and order records, the report should load within an acceptable amount of time without significantly affecting other CRM activities.

NFR-5: Availability

The CRM application should be accessible to authorized users whenever business operations require it.

Requirements:

- Cloud-based application access
- High system availability
- Minimal service interruption
- Reliable access to CRM records
- Business continuity and recovery mechanisms

Example:

Authorized managers and sales representatives should be able to access customer and sales information during normal business operations without depending on a locally installed CRM system.

NFR-6: Scalability

The system should support the growth of The Chai Shop & Co without requiring major changes to the basic CRM architecture.

Requirements:

- Support for increasing numbers of customers
- Support for additional users
- Ability to manage increasing CRM records

- Expandable automation
- Ability to add additional reports and dashboards
- Support for future business branches or departments

Example:

If **The Chai Shop & Co** expands to multiple branches, the Salesforce CRM should be capable of managing additional customers, users, orders, and business records within the same CRM environment.

3.3 Data Flow Diagram

The data flow of the proposed Salesforce CRM system can be represented as:

User → Salesforce Lightning UI → CRM Objects → Validation Rules → Salesforce Flows → Updated Records → Reports → Dashboards → Business Decision

Explanation

1. User
The user interacts with the CRM system by entering or viewing business information.

2. Salesforce Lightning UI
The user enters customer, order, and other CRM information through the Salesforce Lightning interface.

3. CRM Objects
The entered information is stored in appropriate Salesforce standard or custom objects.

4. Validation Rules
Validation rules check whether the entered data satisfies predefined business requirements.

5. Salesforce Flows
Flows automate business processes such as record updates, calculations, notifications, and other required actions.

6. Updated Records

The processed information is stored and maintained in Salesforce.

7. Reports

Salesforce reports organize CRM data into meaningful business information.

8. Dashboards

Dashboards present important information visually using charts, tables, and metrics.

9. Business Decision

Managers and authorized users analyse the information to monitor performance and support business decisions.

3.4 Technology Stack

Layer	Technology	Purpose
Frontend / User Interface	**Salesforce Lightning Experience**	Provides the user interface for accessing CRM applications, records, forms, reports, and dashboards.
Database / Data Storage	**Salesforce Cloud Database**	Stores customer, order, billing, and other CRM information.
Application Platform	**Salesforce Platform**	Provides the core cloud platform for developing and managing the CRM solution.
Automation	**Salesforce Flow**	Automates business processes, record updates, calculations, and notifications.
Data Validation	**Validation Rules**	Ensures that users enter valid and required information.
Security	**Profiles, Permission Sets & Sharing Settings**	Controls access to objects, fields, and records.
Analytics	**Salesforce Reports**	Provides structured analysis of customer, order, sales, and billing data.

Visualization	**Salesforce Dashboards**	Displays important business information through charts, tables, and metrics.
Communication	**Email Alerts / Salesforce Email Automation**	Sends automated notifications and business-related emails.

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The proposed Salesforce CRM system addresses the limitations of manual customer and business record management by providing a centralized cloud-based platform for storing, managing, and analysing business data. It reduces manual data entry and repetitive activities through Salesforce automation, validation rules, and flows.

The system enables users to manage customer and order information, automate billing-related calculations, maintain data accuracy, and send automated email notifications. Salesforce Reports and Dashboards provide summarized business information that helps managers monitor sales, customer activity, and overall business performance.

The solution therefore provides **centralized data management, process automation, improved data accuracy, and better access to business information**, supporting efficient operations and informed decision-making for **The Chai Shop & Co**.

4.2 Proposed Solution

The proposed solution is a **Salesforce-based CRM application** designed to manage customer information, business accounts, orders, billing-related information, automation, reporting, and user access.

Parameter	Description

User Login & Authentication	Allows authorized users to securely access the Salesforce CRM application using their Salesforce credentials and assigned permissions.
Customer Record Management	Enables authorized users to create, view, and update customer information such as name, contact details, and address.
Business Account Management	Enables users to maintain relevant employer, enterprise, or business account information required by the CRM process.
Order Management	Supports the creation and management of customer orders, including relevant product, quantity, and order information.
Automated Billing Calculation	Uses Salesforce formula fields and automation to calculate relevant billing amounts based on order information such as quantity and price.
Data Validation	Uses validation rules to improve data accuracy by checking information entered important fields, such as phone numbers and other required business information.
Record Types & Page Layouts	Provides appropriate record types and page layouts to organize information according to different business requirements and user needs.
Global Picklists / Standardized Values	Provides predefined values for applicable fields such as product category, type, status, or other classification fields, helping maintain consistent data.
Email Notification System	Sends automated email notifications based on configured business conditions, such as birthday offers, order-related notifications, or other customer communications.
Flow Automation	Uses Salesforce Flow to automate repetitive business processes, update records, perform actions, and trigger notifications based on defined conditions.
Report Generation	Provides reports for analysing customer, order, sales, and other relevant CRM information.
Dashboard Visualization	Presents important business information through charts, tables, and other dashboard components to support easier analysis.

Data Management	Provides centralized cloud-based storage and management of CRM records, allowing authorized users to access and maintain business information.
User Access Management	Controls access to CRM objects, fields, and records using Salesforce security features such as Profiles, Permission Sets, and sharing controls.

.

4.3 Solution Architecture

The proposed CRM solution follows a layered architecture in which the user interface, business logic, data storage, security, automation, and analytics work together.

Architecture Layers

1. Presentation Layer – Salesforce Lightning UI

Provides the interface through which users interact with the CRM application. Users can access customer records, orders, forms, reports, dashboards, and other Salesforce features according to their permissions.

2. Application & Automation Layer – Salesforce Flows and Business Logic

Contains the automation and business rules required by the application. Salesforce Flows perform tasks such as updating records, processing information, and triggering email notifications. Validation rules ensure that entered information satisfies predefined requirements.

3. Data Layer – Salesforce Objects

Stores customer, account, order, billing-related, and other CRM information in Salesforce objects. Standard and custom objects can be used according to the requirements of the application.

4. Security Layer – Profiles, Permission Sets & Sharing

Controls which users can access particular objects, fields, and records. This layer helps protect business information from unauthorized access.

5. Analytics Layer – Reports & Dashboards

Transforms stored CRM information into reports and dashboard visualizations. Managers can use these outputs to monitor customer activity, orders, sales, and other business metrics.

Overall Architecture Flow

Business Analysis & Decision Making

4.4 Architecture Explanation

The architecture provides a clear separation between user interaction, data management, automation, security, and analytics.

When a user enters information through the **Salesforce Lightning UI**, the data is stored in the appropriate Salesforce object. **Validation Rules** verify whether the information meets the

defined requirements. **Salesforce Flows** then automate applicable business processes, such as updating records or sending notifications.

The processed information remains available within the Salesforce data layer and can subsequently be analysed using **Reports and Dashboards**. At the same time, **Profiles, Permission Sets, and sharing controls** help ensure that users can access only the information required for their responsibilities.

This architecture supports **modularity, maintainability, data consistency, security, and scalability** while providing a centralized platform for managing the CRM activities of The Chai Shop & Co.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The **Chai Shop & Co CRM project** follows an Agile-inspired development approach in which the implementation is divided into manageable phases and milestones. The project is developed incrementally using Salesforce configuration, automation, security, reporting, and dashboard features.

The major planning activities include:

- Salesforce development environment setup.
- Identification and creation of required standard and custom objects.
- Configuration of fields, relationships, and standardized picklist values.
- Creation of custom tabs and a Lightning application for easy navigation.
- Configuration of page layouts and record types according to business requirements.
- Implementation of validation rules to improve data accuracy.
- Development of Salesforce Flows for business process automation.
- Configuration of email templates and automated email notifications.
- Creation of reports for customer, order, sales, and business analysis.

- Development of dashboards for visualizing important business information.
- Testing of individual features and complete business processes.
- Review and correction of configuration or automation issues.
- Final validation of the CRM application against the defined requirements.

The project is organized into sprints so that individual features can be developed, tested, reviewed, and integrated progressively.

5.2 Product Backlog, Sprint Schedule, and Estimation

The following product backlog defines the major user stories required to implement the Salesforce CRM application.

Sprint	Functional Requirement / Epic	User Story Number	User Story / Task	Story Points	Priority	Team Member
Sprint-1	Developer Setup	USN-1	As an admin, I want to configure a Salesforce development environment so that I can build and test the Chai Shop & Co CRM application.	1	High	Member 1
Sprint-1	Data Modelling	USN-2	As an admin, I want to create the required customer and business objects so that CRM data can be stored systematically.	3	High	Member 2

Sprint-2	Application Navigation	USN-3	As a user, I want dedicated tabs for the required objects so that I can easily navigate and manage CRM records.	3	High	Member 3
Sprint-2	Application Navigation	USN-4	As a manager, I want a dedicated Lightning App so that the major CRM operations can be accessed from a centralized application.	3	High	Member 4
Sprint-2	Data Modelling	USN-5	As an admin, I want to create the required customer and order fields so that relevant business information can be captured accurately.	5	High	Member 1
Sprint-2	User Interface	USN-6	As a user, I want customized page layouts so that relevant fields are displayed clearly during record creation and editing.	5	High	Member 2
Sprint-2	Data Classification	USN-7	As a manager, I want appropriate record types so that different business categories can be managed	5	Medium	Member 3

			according to their requirements.			
Sprint-3	Data Validation	USN-8	As a system, I want to validate customer and order information so that incorrect or incomplete data is prevented.	3	High	Member 4
Sprint-3	Automation	USN-9	As a system, I want automated flows and email notifications so that customers and users receive relevant updates based on defined conditions.	5	High	Member 1
Sprint-4	Billing Automation	USN-10	As a system, I want to calculate order-related billing amounts automatically so that manual calculations are reduced.	5	High	Member 2
Sprint-5	Reporting	USN-11	As a manager, I want customer, order, and sales reports so that I can analyse business performance.	4	High	Member 3
Sprint-6	Dashboard	USN-12	As a manager, I want visual dashboards so that I can quickly understand important	4	Medium	Member 4

	CRM and business metrics.

5.3 Sprint Schedule

The project can be planned as six progressive sprints.

Sprint	Major Activities	Duration	Planned Outcome
Sprint-1	Development environment, objects and basic data model	6 Days	Salesforce environment and basic CRM data structure
Sprint-2	Tabs, Lightning App, fields, relationships, layouts and record types	6 Days	Functional CRM application structure
Sprint-3	Validation Rules, Email Templates and Flow Automation	6 Days	Data validation and automated processes
Sprint-4	Billing calculations and related automation	6 Days	Automated billing-related processing
Sprint-5	Reports and data analysis	6 Days	Business reports
Sprint-6	Dashboards, testing and final refinement	6 Days	Completed CRM dashboard and final system

5.4 Project Tracker, Velocity & Burndown

A more accurate tracker based on the backlog above is:

Sprint	Total Story Points	Duration	Planned Completion	Story Points Completed	Actual Release
Sprint-1	4	6 Days	End of Sprint-1	4	End of Sprint-1

Sprint-2	21	6 Days	End of Sprint-2	21	End of Sprint-2
Sprint-3	8	6 Days	End of Sprint-3	8	End of Sprint-3
Sprint-4	5	6 Days	End of Sprint-4	5	End of Sprint-4
Sprint-5	4	6 Days	End of Sprint-5	4	End of Sprint-5
Sprint-6	4	6 Days	End of Sprint-6	4	End of Sprint-6
Total	**46**	**36 Days**	—	**46**	—

5.5 Sprint Velocity

Velocity represents the number of story points completed by the team during a sprint.

Based on the proposed plan:

Sprint	Planned Story Points	Completed Story Points	Velocity
Sprint-1	4	4	4
Sprint-2	21	21	21
Sprint-3	8	8	8
Sprint-4	5	5	5
Sprint-5	4	4	4
Sprint-6	4	4	4

Total Planned Story Points = 46

5.6 Project Development Phase

Project Flow

The project development process is divided into sequential milestones. Each milestone represents a major configuration, development, automation, or analysis activity within the Salesforce CRM application.

Milestone 1: Development Environment Setup

Configure the Salesforce development environment required for implementing the CRM application.

Milestone 2: Object Creation

Create the required standard and custom Salesforce objects for storing CRM and business information.

Milestone 3: Custom Tabs

Create tabs for the required objects to simplify application navigation.

Milestone 4: Lightning App Creation

Configure a dedicated Salesforce Lightning application containing the required objects, tabs, and navigation items.

Milestone 5: Global Picklists

Configure standardized picklist values for applicable fields to improve data consistency.

Milestone 6: Fields and Relationships

Create required fields and establish relationships between relevant objects.

Milestone 7: Page Layouts

Configure page layouts to organize fields and provide an appropriate data-entry experience.

Milestone 8: Record Types

Create record types where different business processes or categories require different record configurations.

Milestone 9: Validation Rules

Implement validation rules to prevent invalid or incomplete data from being saved.

Milestone 10: Email Templates

Create email templates for predefined customer and business communications.

Milestone 11: Salesforce Flows

Develop flows to automate repetitive business processes, record updates, calculations, and notifications.

Milestone 12: Reports and Dashboards

Create reports and dashboards to analyse CRM information and provide visual business insights.

Milestone 13: Testing and Finalization

Test the complete application, resolve identified issues, verify the configured features, and finalize the project documentation.

5.7 What You Will Learn

Through the implementation of this project, the following Salesforce concepts and practical skills will be learned:

1. **Salesforce CRM Application Development**
2. **Standard and Custom Objects**
3. **Fields and Field Data Types**
4. **Object Relationships**
5. **Picklists and Global Value Sets**
6. **Custom Tabs and Lightning Applications**
7. **Page Layouts**
8. **Record Types**
9. **Validation Rules**
10. **Email Templates and Email Automation**
11. **Salesforce Flow Automation**
12. **Reports and Dashboards**
13. **Salesforce Security and User Access**
14. **Agile-Based Project Planning**
15. **Testing and Deployment Concepts**

Implementation

Milestone 1 - Salesforce developer account creation:

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

1. Go to https://developer.salesforce.com/signup
2. On the sign-up form, enter the following details:

   https://developers.salesforce.com/Signup*

   1) **First name & Last name**
   2) **Email**

3) **Role: Developer**
4) **Company: College or Company Name**
5) **Country: India**
6) **Postal Code: pin code**
7) **Username: should be a combination of your name and company**

This need not be an actual email id; you can give anything in that format: username@organization.com

Activity 2: Account Activation:

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.
2. Click on Verify Account.
3. Give a password and answer a security question and click on change password.
4. Then you will redirect to your salesforce setup page.

Milestone 2 - Objects

1. In your Salesforce org, click the gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. On the Object Manager page, click Create | Custom Object.

Activity 1: Employer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
    - Label: Employer Account
    - Plural Label: Employer Accounts
    - Enter Record Name Label and Format

      Record Name: Employer Account Name

      Data Type: Text

- In Optional features: check the boxes for Allow Reports | Allow Activities | Track Field History.
- Search Status: Check the box for Allow Search.
- Save

Activity 2: Customer Account Object

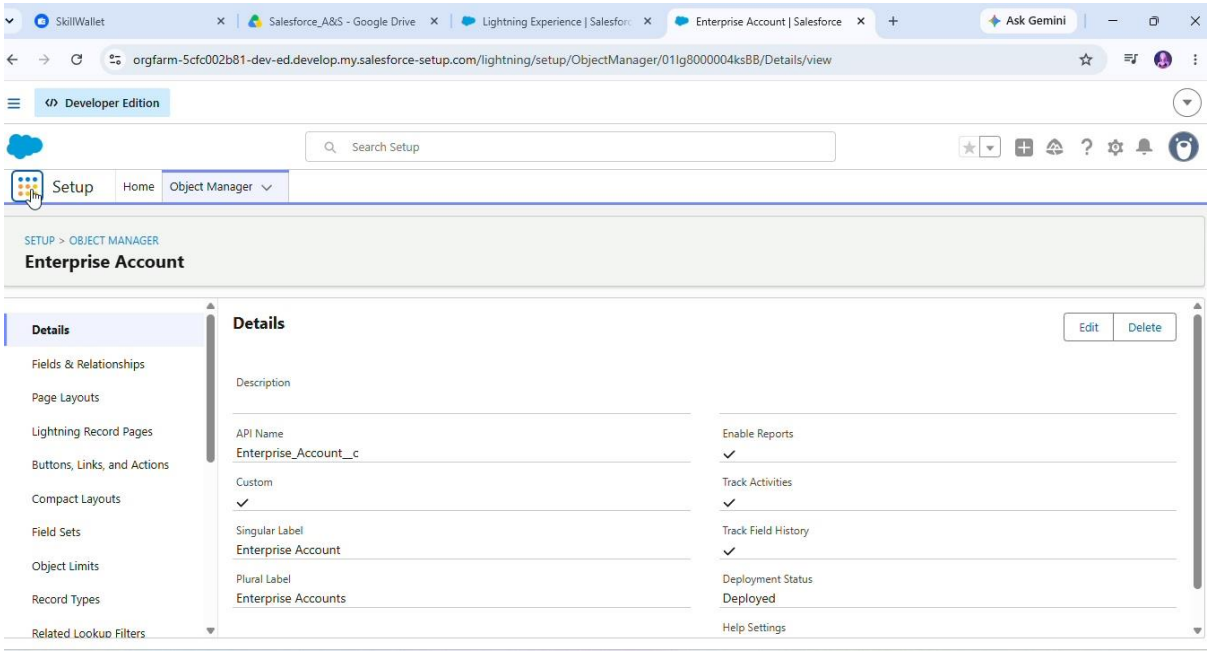

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
    - Label: Customer Account
    - Plural Label: Customer Accounts
    - Enter Record Name Label and Format

      Record Name: Customer Account Name

      Data Type: Text

    - In Optional features: check the boxes for Allow Reports | Allow Activities | Track Field History.
    - Search Status: Check the box for Allow Search.
    - Save

Activity 3: Enterprise Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
    - Label: Enterprise Account
    - Plural Label: Enterprise Accounts
    - Enter Record Name Label and Format

      Record Name: Enterprise Account Name

      Data Type: Text
    - In Optional features: check the boxes for Allow Reports | Allow Activities | Track Field History.
    - Search Status: Check the box for Allow Search.
    - Save

Milestone 3 -Tabs

Activity 1: Custom tabs creation

- Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)
- Select Object (Employer Accounts) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the included tab.
- Make sure that the Append tab to users' existing personal customizations is checked.
- Click Save.
- Repeat the same steps for Customer Accounts and Enterprise Accounts.

Milestone 4 - The Lightning App

Activity 1: Create a lightning app

- Go to setup page → search “app manager” in quick find → select “app manager” → click on new lightning App.
- Fill the app name in app details and branding as follow
- App Name: TheChaiShop&Co

- Developer Name: Auto Populates
- Add image optional (if you want to give any image you can otherwise not mandatory) - Add Primary color Hex or leave it to default.

Then click Next.

1. **In App options**

   Navigation style: Standard navigation

   Setup experience: setup

   Supporters form factors: Desktop and phone

   Then click Next.

2. **In Utility items**

   Utility Bar alignment: Default

   Then click Next.

3. **Navigation items**

   Select the created Custom Objects and required standard objects

   ∉ Customer Accounts

   Employer Accounts

   Enterprise Accounts

   Reports

   Dashboards

4. To Add User Profiles: System Administrator
5. Click Save & Finish.

Milestone 5: Global Picklist

Activity 1: Create Global Picklist

1. In Quick Find Box Search for: Picklist value sets and click New.

    ∉ Label: Gender

    Name: Auto Populates

    Values: Male

    Female

    Others

    Click Save & New.

2. Create three more Global picklists following the same steps.

    ∉ Label: Items

    Name: Auto populates

    Values: Platinum Tea Powder

    Double Delight Tea Powder

    Super Dust Tea Powder

    Osmania Biscuits (Value Pack)

    Osmania Biscuits (Premium Pack)

Dry Fruit Biscuits

Fruit Biscuits

Salt Biscuits

Multigrain Biscuits

Ragi Biscuits

Double Choco Chip Cookies

Butter Almond Cookies

Melting Moments Cookies

Honey Oats Cookies

Delight Box

Signature Box

Assorted Box

Click Save & New.

- Label: Payment Mode

  Name: Auto populates

  Values: Gpay

  PhonePe

  Paytm

  Credit or Debit card

  Cash.

  Click Save & New.

- Label: Type of Items

  Name: Auto populates

  Values: Tea powder

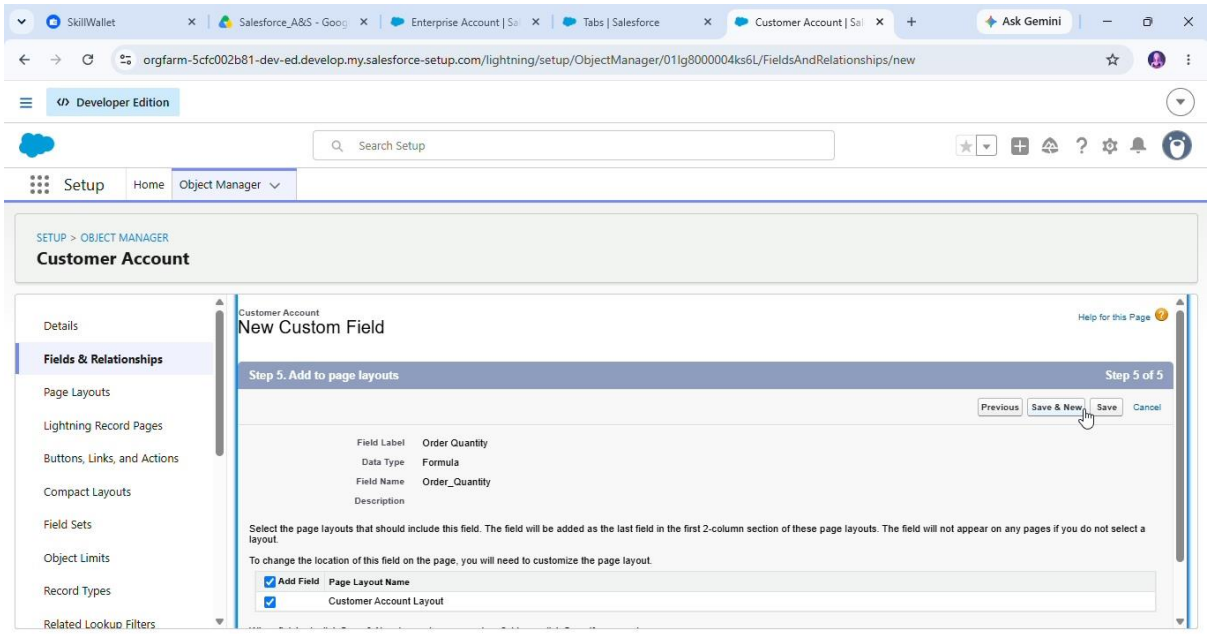

Cookies

Gift Hampers

Click Save.

Milestone 6: Fields & Relationships

Activity 1: Create Custom fields for Employer Account

In your Salesforce org, click the gear icon on the top left and select Setup to open Setup.

Click the Object Manager tab. If you don’t see it, enter Object Manager in the Quick Find box.

From the object manager page, In the Quick Find box, Search for the custom object you just created: Employer Account

From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.

Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn’t already exist.

Next, choose a data type as Text. Choosing a data type helps you format the field input.

Click on next

- ☐ Data Type: Text

  Field Label: First Name

  Field Name: Auto Populates

  Length: 25

  Required: Check the box

  Click Next → Next → Save and New.

Repeat the Same steps for remaining fields

- ☐ Data Type: Text

  Field Label: Last Name

  Field Name: Auto Populates

  Length: 25

  Required: Check the box

  Click Next → Next → Save and New.

- ☐ Data Type: Picklist

  Field Label: Gender

  Values: Use Global Picklist value set and

  Select Gender from the dropdown menu.

  Field Name: Auto Populates.

  Required: Check the box

  Click Next → Next → Save and New.

☐ Data Type: Phone

Field Label: Phone Number

Field Name: Auto Populates

Required: Check the box

Click Next → Next → Save and New.

☐ Data Type: Email

Field Label: Email ID

Field Name: Auto Populates

Required: Check the box

Click Next → Next → Save and New.

☐ Data Type: Date

Field Label: Date of Birth

Field Name: Auto Populates

Required: check the box

Click Next → Next → Save and New.

☐ Data Type: Text

Field Label: Aadhar Number

Field Name: Auto Populates

Length: 12

Click Next → Next → Save and New.

☐ Data Type: Text

Field Label: PAN Details

Field Name: PAN Details

Length: 10

Click Next → Next → Save and New.

☐ Data Type: Picklist

Field Label: Designation

Field Name: Auto Populates

Value: Enter value, with each value separated by a new line.

Manager

Finance and Accounting

Kitchen Staff

Cashier

Servers

Click Next → Next → Save and New.

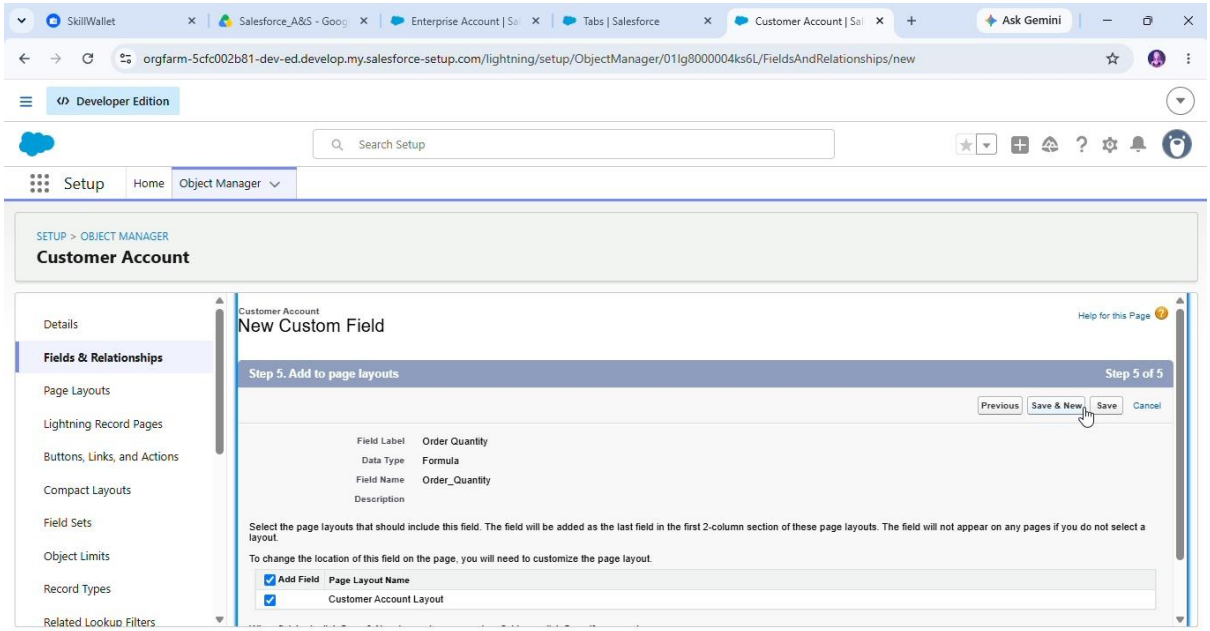

☐ Data Type: Currency

Field Label: Salary

Field Name: Auto Populates

Click Next → Next → Save.

Activity 2: Create Custom fields for Customer Account

1. Data Type: Text

   Field Label: First Name

   Field Name: Auto Populates

   Length: 25

   Required: Check the box

   Click Next → Next → Save and New.

2. Data Type: Text

   Field Label: Last Name

   Field Name: Auto Populates

   Length: 25

   Required: Check the box

   Click Next → Next → Save and New.

3. Data Type: **PickList**

   Field Label: Gender

   Values: Use **Global Picklist** value set and

   Select Gender from the dropdown menu.

Field Name: Auto Populates.

Required: Check the box

Click Next → Next → Save and New.

4. Data Type: Phone

   Field Label: Phone Number

   Field Name: Auto Populates

   Required: Check the box

   Click Next → Next → Save and New.

5. Data Type: Date

   Field Label: Date of Birth

   Field Name: Auto Populates

   Required: check the box

   Click Next → Next → Save and New.

6. Data Type: **Formula**

   Field Label: Date of Birthday is today?

   Field Name: Auto Populates

   Formula Return: **Checkbox**

Formula:

```
IF (
AND (
DAY (TODAY ()) = DAY( Date_of_Birth__c ) ,
MONTH (TODAY ()) = MONTH( Date_of_Birth__c )),
TRUE,
FALSE)
```

Click Next → Next → Save and New.

7. Data Type: Email
   Field Label: Email ID
   Field Name: Auto Populates
   Required: Check the box
   Click Next → Next → Save and New.

8. Date Type: Text
   Field Label: Address
   Field Name: Auto Populates
   Length: 125
   Click Next → Next → Save and New.

9. Date Type: **Multi Select Picklist**
   Field Label: Type of Items
   Values: Use **Global Picklist** value set and
   Select **Type of Items from** the dropdown menu.
   Field Name: Auto Populates.
   Required: Check the box
   Click Next → Next → Save and New.

10. Date Type: **Multi Select Picklist**
    Field Label: Products purchased

Values: Use **Global Picklist** value set and

select **Items** from the dropdown menu.

Field Name: Auto Populates.

Required: Check the box

Click Next → Next → Save and New.

11. Date Type: **Multi Select Picklist**

Field Label: Chai

Value: Enter value, with each value separated by a new line.

TheChaiShop&Co Special Tea

Single Tea

Masala Tea

Lemon Tea

Ginger Tea

Green Tea

Sugar Free Tea

Click Next → Next → Save and New.

12. Data Type: **Picklist**

Field Label: Payment Mode

Values: Use **Global Picklist** value set and

Select **Payment Mode** from the dropdown menu.

Field Name: Auto Populates.

Required: Check the box

Click Next → Next → Save and New.

13. Data Type: **Lookup Relationship**

Related To: Employer Account

Field Label: Associated Employer

Field Name: Auto Populates

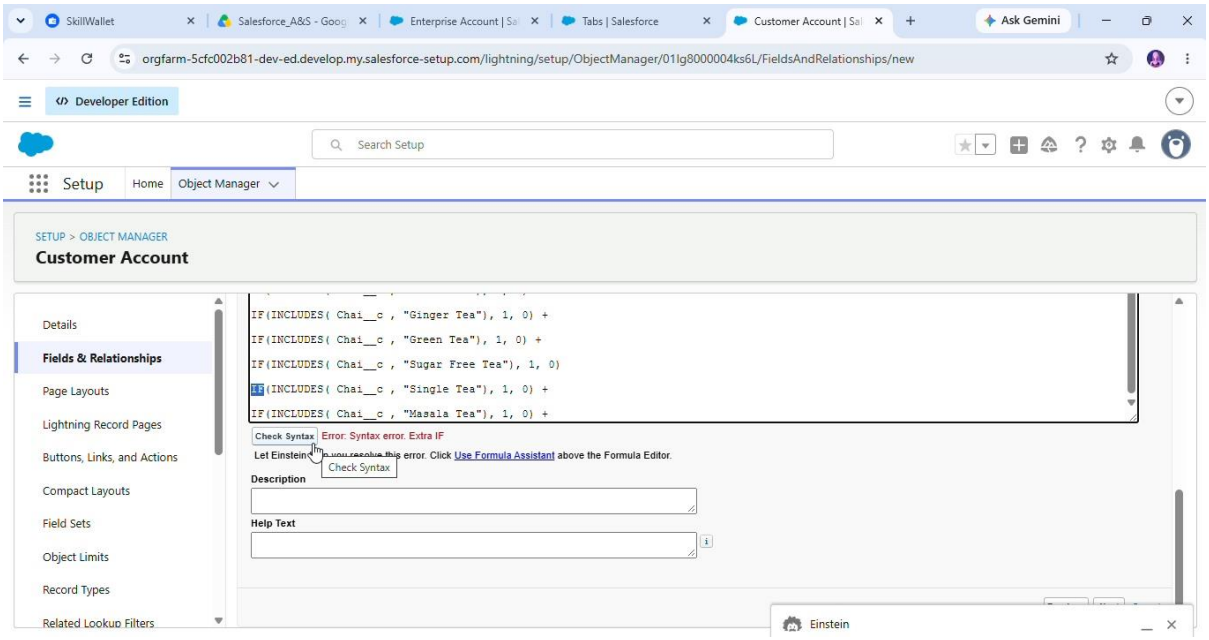

Click Next → Next → Save and New.

14. Data Type: **Formula**

Field Label: Order Quantity

Field Name: Auto Populates

Formula Return: **Number**

Enter Formula = Quantity (Number) =

```
IF (INCLUDES( Products_Purchased__c , "Platinum Tea Powder"), 1, 0) +
        IF (INCLUDES( Products_Purchased__c , "Double Delight Tea Powder"), 1, 0) +

Activity 3: Create Custom fields for Enterprise Account

1. Data Type: Text

   Field Label: Enterprise Name

   Field Name: Auto Populates

   Length: 25

   Required: Check the box

   Click Next → Next → Save and New.

2. Data Type: Phone

   Field Label: Phone Number

   Field Name: Auto Populates

   Required: Check the box

   Click Next → Next → Save and New.

3. Data Type: Email

   Field Label: Email ID

   Field Name: Auto Populates

   Required: Check the box

   Click Next → Next → Save and New.

4. Date Type: Text

   Field Label: Address

   Field Name: Auto Populates

   Length: 125

   Click Next → Next → Save and New.

5. Date Type: **Multi Select Picklist**

   Field Label: Type of Items

   Values: Use **Global Picklist** value set and

   Select **Type of Items from** the dropdown menu.

   Field Name: Auto Populates.

   Required: Check the box

Click Next → Next → Save and New.

6. Date Type: **Multi Select Picklist**

   Field Label: Products purchased

   Values: Use **Global Picklist** value set and

   select **Items** from the dropdown menu.

   Field Name: Auto Populates.

   Required: Check the box

   Click Next → Next → Save and New.

7. Data Type: **Lookup Relationship**

   Related To: Employer Account

   Field Label: Associated Employer

   Field Name: Auto Populates

   Click Next → Next → Save and New.

8. Data Type: **Formula**

   Field Label: Order Quantity

   Field Name: Auto Populates

   Formula Return: **Number**

Enter Formula = Quantity (Number) =

```
IF (INCLUDES( Products_Purchased__c , "Platinum Tea Powder"), 1, 0) +
        IF (INCLUDES( Products_Purchased__c , "Double Delight Tea Powder"), 1, 0) +

    Values: Use **Global Picklist** value set and

    Select **Payment Mode** from the dropdown menu.

    Field Name: Auto Populates.

    Required: Check the box

    Click Next → Next → Save.

7. FUNCTIONAL & PERFORMANCE TESTING

The testing phase was conducted to verify that the Salesforce CRM application functions according to the defined requirements. Each major feature was tested using appropriate test scenarios, and screenshots were captured from the Salesforce Lightning interface as evidence of successful implementation.

7.1 Functional Testing

The following functional areas were tested:

- **Object Record Creation:** Verified in the creation and storage of records for Customer, Employer, Enterprise, and other configured objects.
- **Data Validation:** Tested validation rules for applicable fields such as Aadhaar, PAN, and phone numbers to ensure that invalid data is rejected.
- **Record Types and Page Layouts:** Verified that the appropriate record type and page layout are displayed according to the configured business requirements.
- **Fields and Relationships:** Verified that required fields and relationships between objects function correctly.

- **Formula Fields:** Tested formula calculations related to order quantity, price, and billing amounts.
- **Flow Automation:** Verified that configured Salesforce Flows execute correctly when their specified conditions are met.
- **Email Automation:** Tested birthday offers and other configured email notifications to verify that the appropriate email action is triggered.
- **Reports:** Verified that reports display the expected customer, order, sales, and business information.
- **Dashboards:** Verified that dashboard components correctly represent the underlying report data.
- **User Access:** Tested Profiles and Permission Sets to verify that users can access only the required features and information.

Functional Testing Summary

Test Area	Expected Result	Status
Customer Record Creation	Customer record should be created successfully with valid data	Passed
Employer/Enterprise Records	Records should be stored correctly	Passed
Phone Validation	Invalid phone number should be rejected	Passed
PAN Validation	Invalid PAN format should be rejected	Passed
Aadhaar Validation	Invalid Aadhaar input should be rejected	Passed
Record Types	Appropriate record type should be available	Passed
Page Layouts	Required fields should be displayed correctly	Passed
Billing Formula	Billing amount should be calculated according to configured formula	Passed
Flow Automation	Flow should execute when its conditions are satisfied	Passed
Email Notification	Configured email action should be triggered correctly	Passed
Reports	Required CRM information should be displayed	Passed
Dashboards	Report data should be represented correctly	Passed

7.2 Performance Testing

Performance testing was considered to verify that the CRM application provides an acceptable user experience when working with records, reports, dashboards, and automation.

The following areas were observed:

- Salesforce pages and records should be loaded without unnecessary delays.

- Record creation and editing should respond appropriately.
- Reports should process the configured data without significant delay.
- Dashboards should display their components correctly.
- Salesforce Flows should execute without unnecessary processing.
- The application should remain usable as the volume of CRM records increases.

Performance observations can be documented based on actual testing performed during the project.

8. ADVANTAGES & DISADVANTAGES

8.1 Advantages

The Salesforce CRM application provides the following advantages:

- **Centralized Data Management** – Customer, order, and business information can be maintained in a centralized Salesforce environment.
- **Reduced Manual Work** – Salesforce Flows and automation reduce repetitive administrative activities.
- **Improved Data Accuracy** – Validation rules and standardized field values help reduce incorrect data entry.
- **Automated Calculations** – Formula fields can perform configured order and billing calculations automatically.
- **Improved Customer Communication** – Automated email notifications can support birthday offers, order-related communication, and other customer interactions.
- **Better Business Visibility** – Reports and dashboards provide structured views of CRM and business information.
- **Controlled Data Access** – Profiles, Permission Sets, and sharing controls help manage user access.
- **Cloud-Based Accessibility** – Authorized users can access the CRM application through the Salesforce platform from supported devices and locations.

8.2 Disadvantages

The system also has some limitations:

- **Salesforce Cost** – Access to Salesforce features may depend on the organization's selected Salesforce edition, licenses, and configuration.
- **Internet Dependency** – Most Salesforce CRM activities require network connectivity.
- **Limited Offline Functionality** – Some CRM operations may not be available when the user is offline.

- **Platform Dependency** – The application depends on the Salesforce platform and its supported features.
- **Configuration Complexity** – Advanced customization and automation may require Salesforce administration or development knowledge.
- **Data Migration Effort** – Moving existing data from spreadsheets or legacy systems into Salesforce may require additional planning and data-cleaning activities.

Important correction

I recommend replacing **"Real-time analytics"** with **"Better Business Visibility"** or **"Improved Business Analysis."**

Reports and dashboards can provide current information from Salesforce data, but claiming "real-time analytics" may imply a specific real-time architecture that your project may not actually implement.

9. CONCLUSION

The **TheChaiShop&Co CRM Application** demonstrates how Salesforce can be used to develop a centralized CRM solution for managing customer and business information. The application integrates data management, validation, automation, billing-related calculations, email notifications, reports, and dashboards within a cloud-based Salesforce environment.

The implementation reduces dependency on manual record management and helps improve data consistency through validation rules and standardized values. Salesforce Flows automate selected business processes, while Reports and Dashboards provide useful information for monitoring and analyzing business activities.

The project also provides practical implementation experience with Salesforce objects, fields, relationships, page layouts, record types, validation rules, email templates, Flow automation, security, reports, and dashboards.

Overall, the project demonstrates the application of Salesforce CRM capabilities to create a **structured, automated, and scalable business management solution for TheChaiShop&Co**.

10. FUTURE SCOPE

The CRM application can be enhanced in the future with additional features to support the growing requirements of the business.

10.1 Mobile CRM Integration

The application can be extended and optimized for mobile users so that sales representatives and managers can access important CRM information while working remotely.

10.2 AI-Based Sales Prediction

AI and Salesforce-supported analytics can be explored to identify sales patterns, forecast potential demand, and provide data-driven insights.

10.3 WhatsApp / SMS Notifications

Integration with appropriate communication services could allow the system to send customer notifications through WhatsApp or SMS in addition to email.

10.4 Inventory Management

An inventory module could be introduced to track product quantities, stock availability, stock movement, and reorder requirements.

10.5 Multi-Branch Support

The application could be extended to support multiple branches or business locations with appropriate data visibility and access controls.

10.6 Advanced Customer Profiling

Customer information could be enhanced with segmentation, purchase history, preferences, interaction history, and other relevant attributes to support personalized customer engagement.

10.7 Advanced Analytics

Additional reports, dashboards, forecasting capabilities, and analytical features could be introduced to provide deeper insights into sales and customer behavior.

10.8 Integration with External Systems

Future versions could integrate Salesforce with accounting, payment, inventory, communication, or other external business systems through appropriate APIs and integration technologies.

11. APPENDIX

11.1 Salesforce Configuration

The project was implemented primarily through Salesforce configuration and platform features, including:

- Standard and Custom Objects
- Custom Fields
- Object Relationships
- Picklists / Global Value Sets
- Custom Tabs
- Lightning Application
- Page Layouts
- Record Types
- Validation Rules
- Formula Fields
- Email Templates
- Salesforce Flows
- Profiles and Permission Sets
- Reports
- Dashboards

11.2 Dataset

The application uses sample or project-specific CRM data for testing and demonstration, including:

- Customer Records
- Employer / Enterprise Records
- Product and Order Information
- Billing-Related Information
- Sales Records

11.3 Tools Used

Tool / Technology	Purpose
Salesforce Developer / Trailhead Playground	Development and configuration environment
Salesforce Lightning Experience	User interface and CRM application
Salesforce Objects	Data storage and management
Salesforce Flow	Business process automation
Validation Rules	Data validation
Formula Fields	Automated calculations
Email Templates	Automated customer communication
Reports	Data analysis
Dashboards	Data visualization

Thank You
